

Private pilots today enjoy aircraft options never before possible. New-technology aircraft place the benefits of high-speed jet travel within your reach. But along with those options come an increasingly complex market structure, “start-up” manufacturers with unproven systems, and aircrew training requirements that may exceed your experience. Unless you remain active in the industry, such options may appear daunting, or leave you with a false sense of security as to a proper course of action. When does it make sense to take that next step?

Founders Aviation removes the “guess work” from these decisions, with experts acting as your advocate every step of the way. Let our staff put proven consulting and trusted representation to work for you: pilot capability assessments, transition & proficiency training, aircraft placement, logistical support, maintenance, and daily managerial tasks. Let Founders Aviation simplify your ownership experience, and give you more time to safely enjoy flying!

EVALUATE YOUR OPTIONS

Whether you’re considering an aircraft upgrade, interested in exploring how to simplify aircraft management tasks, or in need of proficiency training to increase your margin of safety, Founders Aviation is ready to get you there!

FOUNDERS AVIATION’S OWNER-FLOWN PROGRAM is designed to meet the needs of current aircraft owner-pilots by providing market expertise, professional training, and managerial staff necessary to ease your ownership experience and provide ongoing peace of mind.

Are you currently an owner of a light-jet? Are you interested in upgrading from a prop aircraft? Would guidance, management and training from industry experts benefit you?

CONSULTING: Founders Aviation conducts an initial consultation together with you, to initiate guidance through the complex market space of newer light-jet technology. Ensuring an appropriate match for your travel needs and skill level, we’ll design an acquisition and sustainment strategy that fits your financial profile.

ACQUISITION: Through our trusted network of manufacturers and secondary market providers, we ensure the purchase process is free from difficulty.

MANAGEMENT & LOGISTICS: We remove the burden from you. Our ground crews and staff provide support and maintenance to ensure your aircraft always flies at peak performance.

TRAINING: Founders Aviation has expert training and safety staff to ensure you attain the goals and level of expertise needed to make flying safe and fun.

Basic – Ground training and 10-15 hours of flight time, dedicated to general aircraft familiarization, glass cockpit flying basics, high altitude, normal and emergency procedures, instrument approaches, and take-offs and landings.

Intermediate – Approximately 25 hours of flight time going through the skill set mentioned above, and adding full emergency procedures and several longer-range flights to enhance high-altitude navigation and IFR flying skills.

Advanced – 35-40 flight hours with review of the previous components, adding supplementary flying event and night operations.

THE SHORTEST DISTANCE TO SUCCESS
